

Step by step

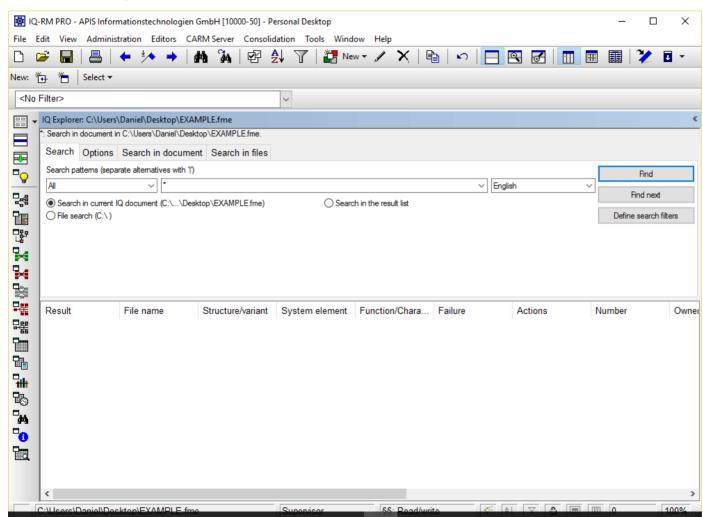

How to create a Status Report

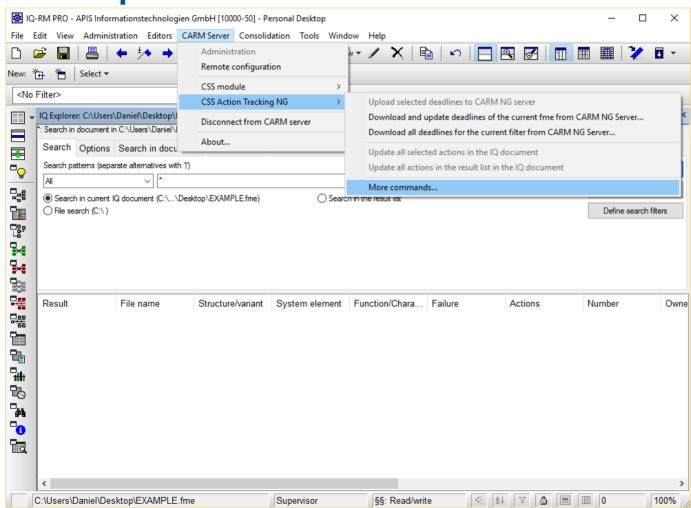

Firstly, you will need to check if the CARM NG settings are correct. For this go to "Tools | Workstation settings | Settings | CARM Server". The IP address and port must be valid to be able to connect.

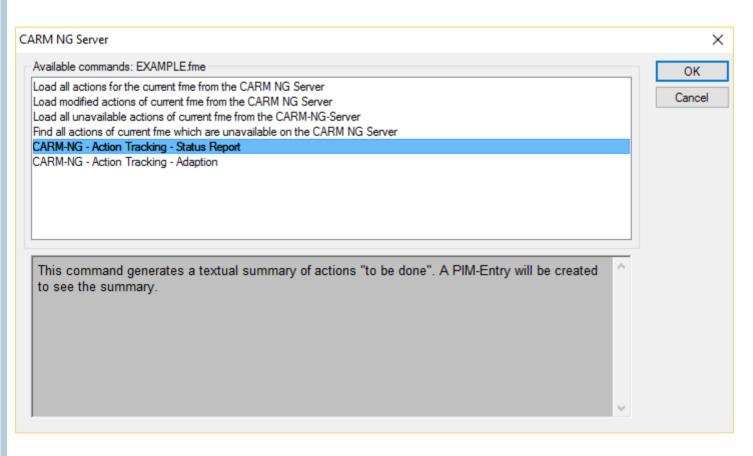

In IQ Explorer, make sure to select "Search in current IQ document"

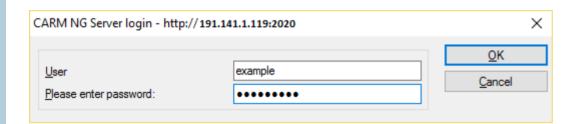

As in the screenshot, select "More commands..." from the menu.

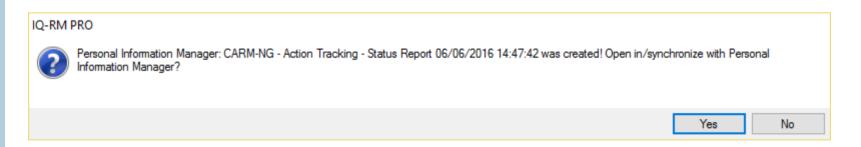

Select "Status Report" from the list. A description of what the function does will appear below.

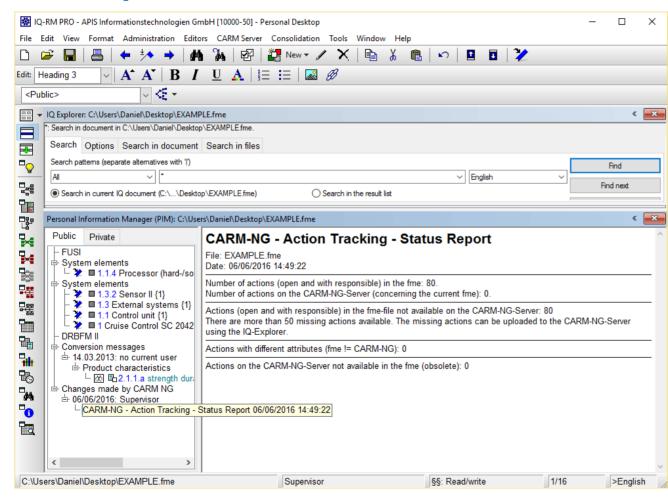

To obtain a connection to the CARM NG Server, a valid username and password is required.

Step 6

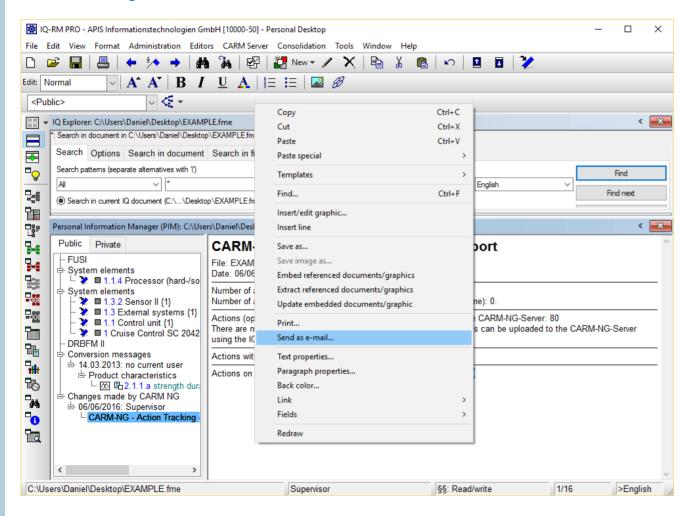

This dialog will appear if the correct username and password are entered. Click "Yes".

You will automatically be directed to the PIM Manager, where you can see the generated Status Report.

There it is! If you want, you can send this report in an email to your friends, family & colleagues, for hours of reading pleasure.
