

XXVI User Conference 2020

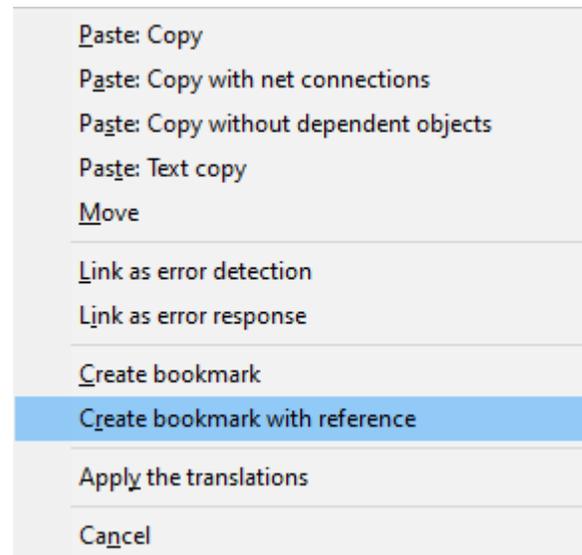

Tips and tricks by the APIS Support team

Alexander Weiß, APIS IT GmbH

Bookmark with reference

Bookmarks with reference are object bookmarks in 2 directions

They are created by drag and drop with right mouse key and CTRL key pressed

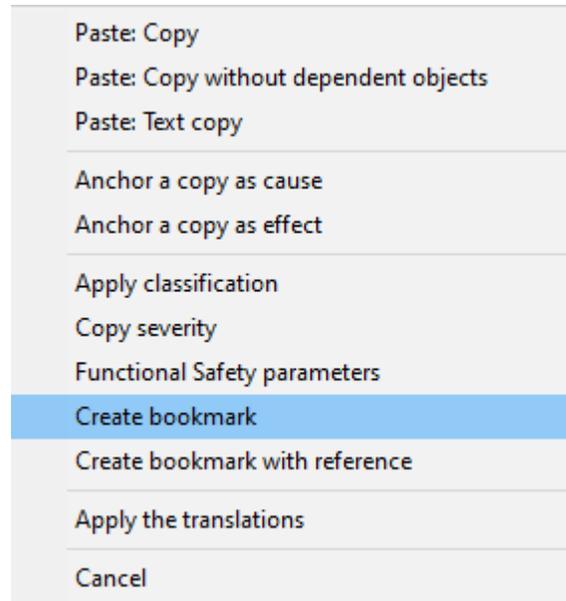

External Bookmarks

The target of an Object bookmark can be an object in another file

Configuration: 2 workspaces with 2 files

Creation by drag and drop similar to tip 1

How to delete notes

A note at one object can exist in many ways:

- For each language
- For each variant
- For each notes category

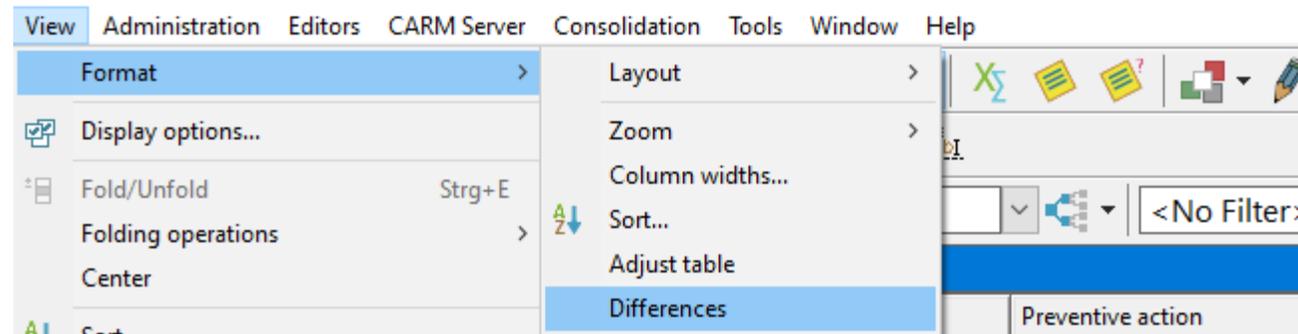

Tip:

Use the **Object Inspector** for deleting notes

Show differences in FMEA forms

For maintenance customers only the well-known comparison mode of structures in the FFA editor now is also available in the FMEA forms editor
(Restriction: No comparison of variants)

- Required configuration: 2 workspaces
- Call menu item: „View | Format | Differences“

Synchronized scrolling for „show differences“

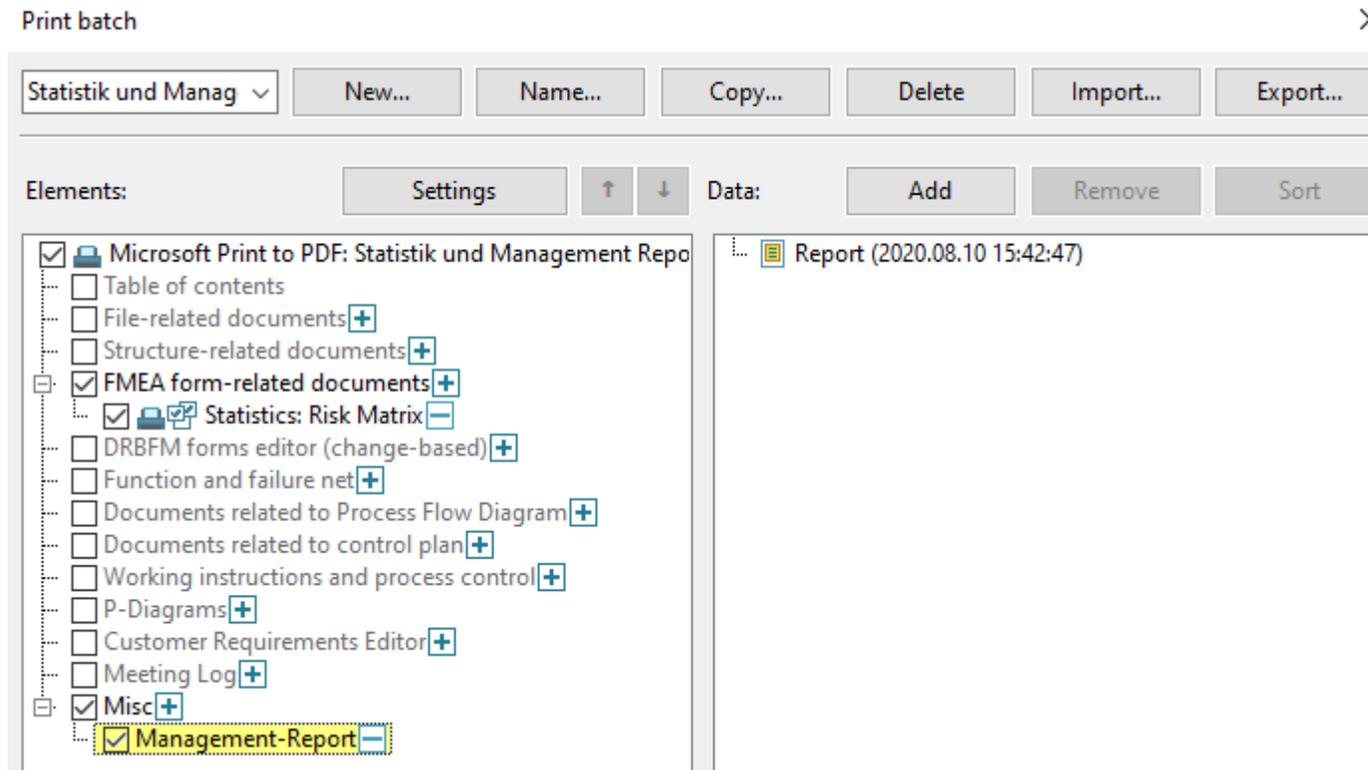

Synchronized scrolling of both workspaces helps to compare large documents

This can be done by pressing the CTRL - key while moving the scroll bar

FMEA Forms Editor VDA 96/VDA 06: Assembly cable to plug (CC.2042 - manufacture signal cable [Process])											
Effect	S	C	Failure mode	Cause	Preventive action original display or temperature target value	O	Detection action	D	RPN	AP	R/D
			force too weak	temperature too low	Initial state: 20.03.2009		install alert signal	3			
				temperature of soldering iron tip falls below lower limit	check soldering iron regularly	3	soldering iron with digital temperature display	7			
				strand is not inserted deep enough into soldering appliance	Initial state: 20.03.2009 defined striping length		operator self-test for insertion depth of skinned strand	8			
				trained operators		3					
Characteristic: <CC> volume resistance < 1 Milliohm											
degree of waste is too high	7		volume resistance too high	sets soldering temperature too low	Initial state: 20.03.2009		digital display of temperature target value	2	install alert signal	3	42
				temperature of soldering iron tip falls below lower limit	Initial state: 20.03.2009		check soldering iron regularly	3	soldering iron with digital temperature display	7	147
FMEA Forms Editor VDA 96/VDA 06: Assembly cable to plug (CC.2042 - manufacture signal cable [Process])											
Effect	S	C	Failure mode	Cause	Preventive action original display or temperature target value	O	Detection action	D	RPN	AP	R/D
			force too weak	ture too low	Initial state: 20.03.2009		install alert signal	3			
				temperature of soldering iron tip falls below lower limit	check soldering iron regularly	3	soldering iron with digital temperature display	5			
				strand is not inserted deep enough into soldering appliance	Initial state: 20.03.2009 defined striping length		operator self-test for insertion depth of skinned strand	8			
				trained operators		3					
Characteristic: <CC> volume resistance < 1 Milliohm											
degree of waste is too high	7		volume resistance too high	sets soldering temperature too low	Initial state: 20.03.2009		digital display of temperature target value	2	install alert signal	3	42
				temperature of soldering iron tip falls below lower limit	Initial state: 20.03.2009		check soldering iron regularly	3	soldering iron with	5	105

Presentation Print including Management Report

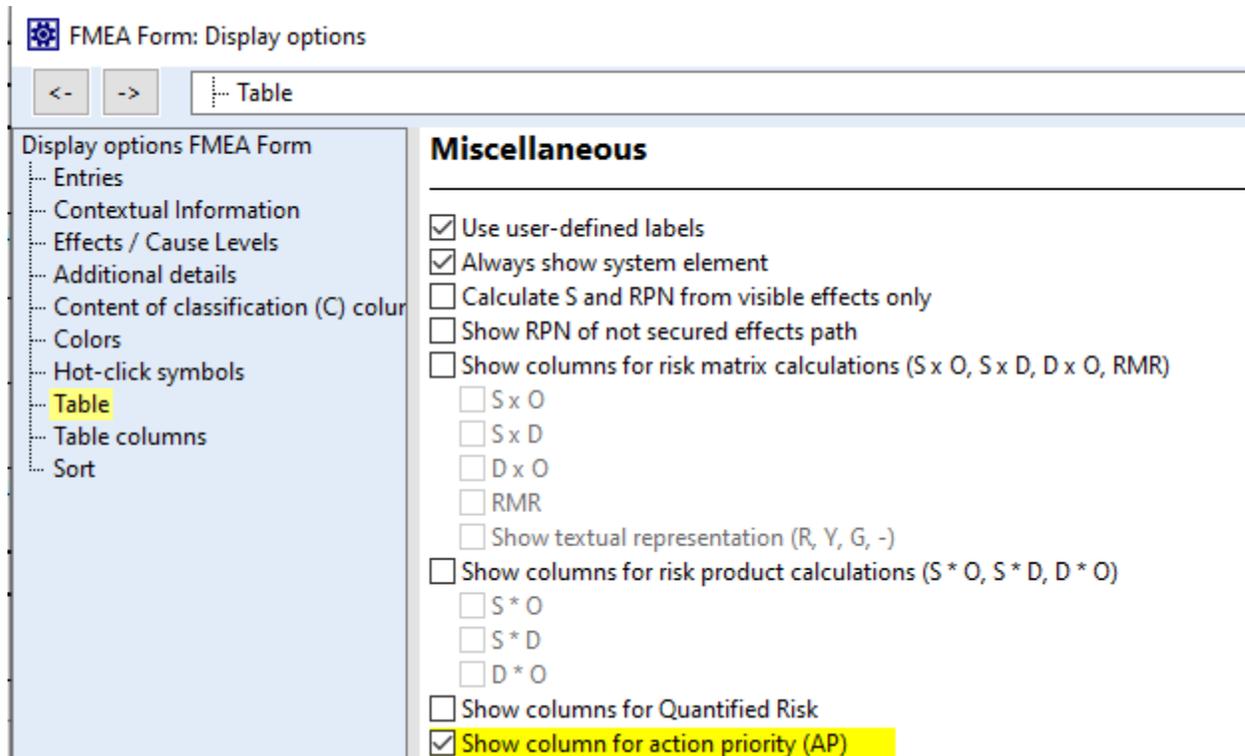

For a common presentation of data or forms together with results from the management report, the report can be included in the presentation print:

AP column in ‚classic‘ FMEA forms

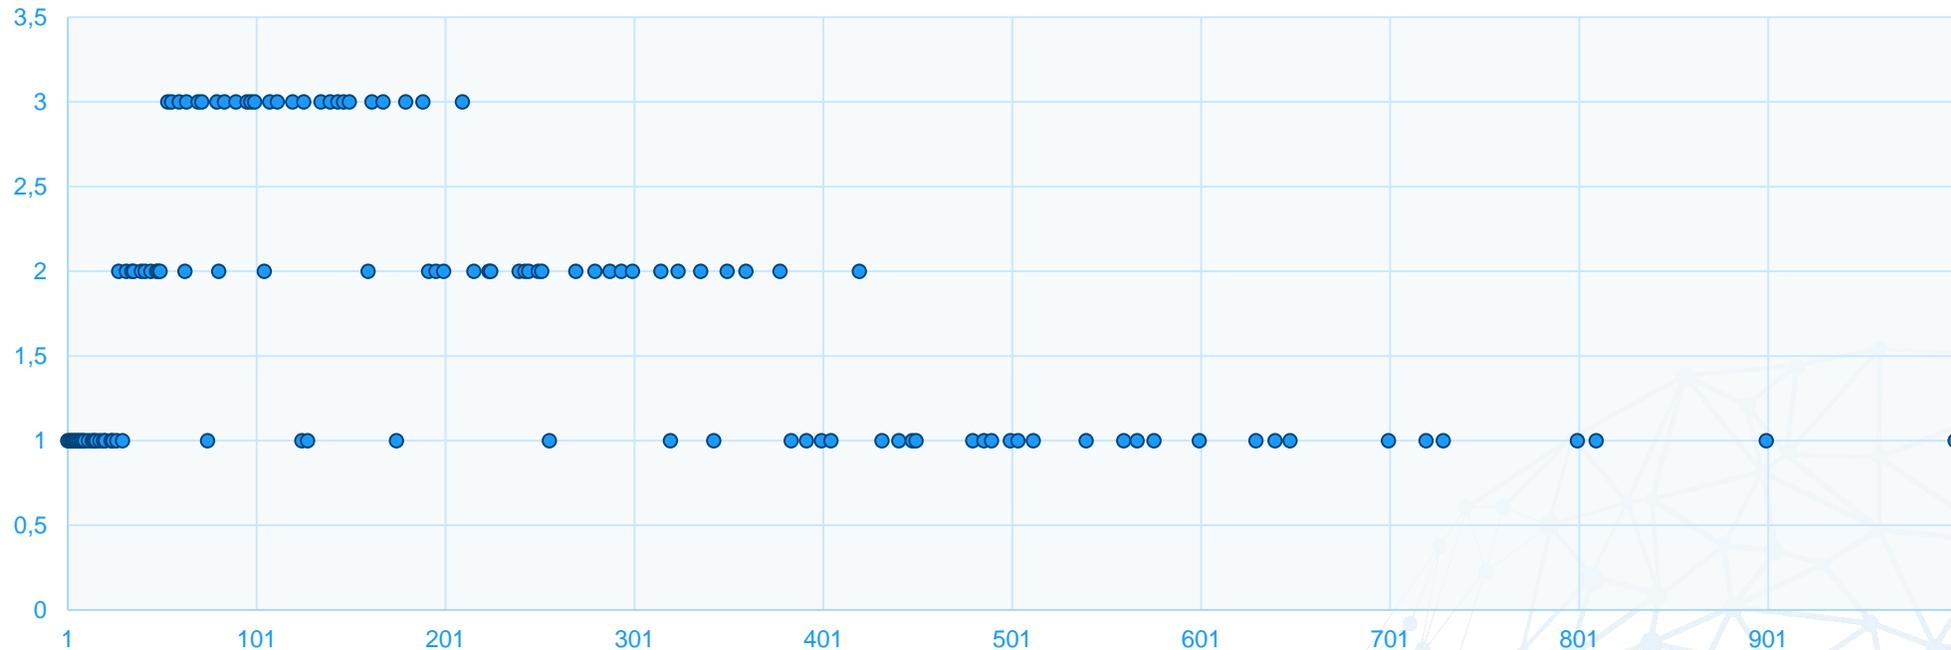

Even the „classic“ form layouts (e.g. VDA96) can show the action priority within a dedicated AP column

Menue: „View | Display options | Table ..“

AP vs. RPN

Number of different AP for each RPN

AP vs. RPN

Intervals with **unambiguous** assignment RPN \rightarrow AP:

$$1 \leq \text{RPN} \leq 27 \text{ and } 432 \leq \text{RPN} \leq 1000$$

Interval with multiple assignment:

$$28 \leq \text{RPN} \leq 420$$

For causes f1 and f2 with RPNs in this interval we observe:

$$\text{RPN}(f1) \leq \text{RPN}(f2) \not\Rightarrow \text{AP}(f1) \leq \text{AP}(f2)$$

Sorting by RPN and AP leads to different results!

You have got problems?

We can solve them!
